Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Factor that induces terminal differentiation developing B-cells to immunoglobulin secreting cells (B similarity).
-!- SUBNUT: Homodimer; disulfide-linked (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-5 family.

SUBUNIT: Homodimer, disulfide-linked.
SUBCELLULAR LOCATION: Secreted.
SUBILIARITY: Belongs to the IL-5 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    257:149-155 (2000)

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
